

NAIC Stock Prospector Tips & Tricks

Small Caps:

One member wrote to say that while they have a VLIS subscription, they still have to go to the library for small stocks. Agreed, so let look at a criteria set for a small stock search using Prospector. Below is just a first effort so please add (and pass on) your improvements.

From the above it is obvious that I prefer Sales over Capitalization for size zoning. You may want to increase the 400 million to something larger.

Someone used a similar Criteria screen but did not see Sales or Capitalization in the resulting Query list. It will not be in the list unless you modify the Report. Actually you probably don't need it. See the below Tip of the Day.
